My android pay is not working

For a long time, mobile wallet services such as Google Pay and Apple Pay have been marketed as technology that could make shopping more convenient and secure. While these benefits were real, it was the coronavirus pandemic that sparked digital payments into the mainstream. To show how quickly our habits have changed, Let's look at some data from Safeway. According to Bloomberg, the supermarket chain reported fewer than 50,000 mobile payment customers during the week of March 1, 2020, however that number had swung to 670,000 by the week of March 29, clearly, as fewer and fewer customers want to handle cash or touch terminal keyboards at points of sale. , turn more to their mobile phones for payment. So it's time to learn more about one of the key players in the field of digital payments: Google Pay. Just what is Google Pay? Is it safe? How does Google Pay work? And most importantly, should you use it? Google Pay in a nutshell Start at the beginning, Google Pay is a mobile wallet and payment system that came across after the merger of Google Wallet and Android Pay in January 2018. To is now one of the largest digital payment services in the world. The way it works is to download the Google Pay app and install it on your smartphone or smartwatch. You can also use Google Pay on your iPhone or iPad, but only if you're in the US. What's interesting is that you don't add money to your digital wallet - you add a payment method instead, such as a debit card, credit card or bank details. Google secured servers store and retrieve data when you use Google Pay to complete your purchase. Consider a mobile wallet that's like a physical wallet, but cards and bills are available from your mobile device. You can choose Google Pay as a payment method when making online purchases, paying in person, or settling for in-app purchases, or you can use Google Pay Send, an in-app feature, to send money to friends and family. So, what makes paying with mobile wallets like Google Pay contactless when you use it in the store? When shopping in person, you simply unlock your phone and hover over the card reader to complete a payment transaction - there's no keyboard to worry about and nothing else you'll have to tap. Is Google Pay safe? While there is no payment system that is 100 percent secure, Google has a wealth of expertise and experience in data protection: After all, collecting and storing information plays a big role in the tech giant's phenomenal success. As a form of security, Google Pay does not store your actual card information on your phone. Instead, this information lives on Google's secured servers and is strongly encrypted. This means that even if your phone is stolen, thieves won't be able to access your debit or credit card details. They can still make purchases if they can unlock their phone, of course, but you can strengthen device with pass code of protection and biometric identification. What makes Google Pay Pay safer than using credit or debit cards is that Google Pay creates a temporary virtual account number for each transaction. This virtual account number is transferred to the merchant to complete the transaction instead of your actual account details, which adds a layer of security. In other words, Google Pay protects your card information so you won't have to rely on your merchant. How to set up Google Pay Setting up Google Pay is simple whether you're using an iOS or Android device. It's worth noting that iOS users will need to launch iOS 7 or later to use Google Pay to send money to friends and family. Also, iOS users can't use the app on their iPhones or iPads to pay in-store. Here are the steps to set up Google Pay: Download the Google Pay app to your mobile device. Many Android phones come with preloaded, if yours doesn't, you'll need to find it in the Google Play Store. Those who use an iPhone or iPad can find the app in their App Store. You'll find him on pay.google.com. Sign in to your Google Account. Add a payment method: a debit or credit card, PayPal, or a U.S. bank account. To add a card to Google Pay, select a credit or debit card as your payment method, and then take a photo of the card or enter your card details manually. Confirm your information: You will be prompted to choose the method you want to check, for example, by text or email. Once you've been confirmed, you're ready to go. If you want to use Google Pay to make in-store purchases, make sure your phone has near-field communication (NFC) features. Google Pay is a widely accepted payment type that you can make through Google Pay vary depending on where you live and the device you have. As mentioned, Google Pay for iOS is only available in the US and India. No Android users can use Google Pay for contactless payments in 29 countries, including the US, UK, Germany and Singapore. Keep in mind that for live purchases, the merchant must support NFC or contactless payments, so make sure the store has a GPAY or NFC payment symbol, or use your app to find stores that accept this form of payment. In addition, your bank or credit card issuer must support Google Pay. Google has a long list of banks and other financial institutions working with its payment platform, including most major banks and credit unions. Another cool feature is that you can pay for train and bus travel with Google Pay in countries such as Australia, Canada, India, Japan, Russia, Singapore, Ukraine, uk and US best credit cards for Google Pay It is the point we touched on earlier, but if you want to connect a credit card to Google Pay, then the credit card issuer must support the Google Pay system of using virtual numbers. Basically, your credit card issuer must support Google so you can use it. While there is no fee for sending money to family and friends or making a debit card purchase, Google Pay will charge 2.9 percent if you use a credit card. They're here. Premium credit cards to use with Google Pay: Blue Cash Preferred® American Express Card: Best for everyday purchases Blue Cash Preferred is a great card to connect to your Google Pay account due to generous cashback rewards for family-friendly purchases. While there is an annual fee of \$95, you will be rewarded with the following refund rates: 6 percent in the U.S. Supermarkets at up to \$6,000 in purchases per year (then 1 percent thereafter) 6 percent on selected U.S. streaming services 3 percent on transit purchases (which includes ride-shares, tolls, parking, taxis and more) 3 percent at U.S. gas stations 1 percent on all other purchases Terms applying a great advantage with this card is that you won't have to enroll to earn these high rates of refund. To sweeten the deal, there is a welcome bonus offer of \$250 in statement loans if you spend \$1,000 in the first three months. Add to that APR's 0 per cent buy-to-let offer over 12 months (then APR up 13.99 per cent to 23.99 per cent thereafter) and it's clear blue cash preferred is the real winner for rewards on everyday purchases. Chase Freedom Unlimited®: Best for a simple refund without an annual fee If you value a simple rewards program you won't have to think about, then Chase Freedom Unlimited is hard to beat. For starters, this card doesn't have an annual fee, so it won't cost you to have it as long as you pay outstanding balances at the end of each month. Here are some of his other strengths: 5 percent on trips purchased through Chase, 3 percent on dining at restaurants and drugstores, and 1.5 percent on all other purchases of a \$200 welcome bonus if you spend \$500 in the first three months 5 percent cash back on grocery shopping (not including Target or Walmart purchases), at up to \$12,000 in the first year 0 percent intro APR on purchases for 15 months , then variable APR up 14.99 percent to 23.74 percent With Chase Freedom Unlimited, you can redeem your refund rewards, statement credits, gift cards, merchandise, experiences, or even travel rewards. You can redeem yourselves conveniently through the Chase portal and your rewards won't expire as long as your account remains open. Citi Rewards+™ Card: Best for rewards on smaller purchases By having a theme with no annual fee, the Citi Rewards+ card deserves a place in your Google Pay account if you're inclined to make much smaller purchases. This card offers: 2x ThankYou Points in supermarkets and gas stations at up to \$6,000 in combined purchases each year, plus 1x ThankYou points on all other purchases No annual fee 15-month intro 0 percent APR offer to buy and transfer balances (then 13.49 percent - 23.49 percent variable APR after that; transfers also require a \$5 or 3 percent balance transfer fee) 15,000 bonusEs Thank you points after spending \$1,000 in the first three months of Citi Rewards+ additional features make unique is. For example, points round up to the nearest 10 each time you make a purchase. So if you buy \$3 coffee you'll earn 10 points instead of three. For someone who often buys small purchases, points can be added up quickly. You'll also get 10 percent points back for the first 100,000 Thanks For redeeming each year, so you're rewarded for earning and redeeming rewards. Your Google Pay wallet is as good a place to store as your physical wallet, your Google Pay mobile wallet is a great place to store bits and pieces you'll need while on the go. This can make your journey almost paperless. For example, you can store rail passes in your Google Pay mobile wallet, so all you have to do to get on a train is keep your smartphone close enough to the reader at the fare door. You can also use your mobile wallet to store digital loyalty cards, gift cards, flights, event tickets and boarding passes. You can send and receive money through Google Pay in the US and India, you can also use this digital platform to send or ask for money without additional fees. This functionality, however, was developed primarily to transfer money between family and friends. You can send up to \$10,000 in one transaction or more than seven days. Florida residents can send \$3,000 every 24 hours. If the recipient does not use Google Pay and does not request money within 14 days, the money will be refunded to you. As Google Pay stacks up to other mobile wallets Just off Google Pay, there are a few other mobile wallets to consider - Apple Pay, Samsung Pay, Chase Pay, PayPal and Venmo are just some other well-known providers. Where tech giants like Google and Apple have an advantage is their reach, as Google Pay and Apple Pay are accepted by many retailers. This means that if you're looking for a mobile wallet to use in the store, you'll probably get more from Google Pay and Apple Pay. If you decide between these two platforms, your choice will likely be determined by which device you own. While iOS users can use the Google Pay app to transfer money between friends and family, Apple Pay can only be used on Apple devices. Google Pay also has advanced security features that include multilayer encryption and you can connect your PayPal account to Google Pay - a feature not available on Apple Pay. However, Apple Pay does not charge a credit card payment fee. It charges a 3 per cent fee if you want to send money to family or friends by credit card - but there are no fees for sending money through a debit card. Conclusion We looked closely at Google Pay - what it is, how to use it, what you can use it for, and how secure the platform is. When it comes down to it, we like what we see. The platform has multiple layers of security, is widely accepted by merchants and extremely easy to set up. It provides convenience and is really good as a physical wallet in terms of holding cards as well as other important bits and pieces in one place. As they are customers concerned about the hygiene of giving and receiving money, this is probably adoption of a mobile wallet will continue to grow. If you're thinking of setting up a mobile wallet, Google Pay is definitely the ultimate choice - especially if you have an Android handset. Just make sure you don't use your credit card as a payment source if you want to avoid fees. Fees.
